The Project Checklist ensures that you have anticipated the crucial steps necessary to complete your project, and the Project Materials List provides a detailed shopping list with quantities and cost.

Project Checklist

The best way to start a wood project is to first list the steps necessary to get the job done. This will allow you to anticipate the tools you'll need, the time required to complete each step, and what to include in your shopping list (below).

Project Materials List

A shopping list is crucial for making sure you bring home everything you need for a project (without making repeat trips to the store). The EZ Materials List is the perfect tool for listing size, quantity, and cost for both lumber and hardware.
